

Climate
Resilience
Consulting

Capabilities Statement

Climate Resilience Consulting is a certified WBE women owned small business and social enterprise that aims to create a more equitable world with more lives saved and livelihoods enhanced in the face of climate disruption. Our mission is to enable communities, governments, and corporations to avoid, prepare for, and resist the global and local impacts of climate change.

APPROACH

The UN has identified four components of adaptation for resilience: assessment, planning, implementation, and monitoring. We work with our clients to obtain success in each component, enhancing communities and markets through adaptation. We excel at creating **resilience strategies**, increasing **resilience finance**, and building **resilience tools** for our public, private, and nonprofit clients by:

- ***Connecting community knowledge to project success*** – Our projects bridge between science and real-world decision-making, producing solutions that are practical and actionable.
- ***Crafting consensus for action*** – Our projects start with community assets and concerns and get internal and external buy-in, implementing initiatives with limited resources.
- ***Accomplishing short and long term aims*** – Our projects focus on now and later, deriving immediate benefits while mitigating future risks.

CORE COMPETENCIES

- Institution Resilience Strategy
- Local & National Resilience Policy
- Resilience Finance and Funding
- Social Equity & Collateral Benefits
- Risk Reduction & Continuity Planning
- Community Engagement & Partnerships
- Resilience Measurement

**WE HAVE OVER 30 YEARS
